

Main targets and achievements

Dr. Markku Heino Spinverse

LuxTurrim5G - Building key enablers for a Digital Smart City

LuxTurrim5G is a Nokia Bell Labs driven Finnish public funded Smart City Ecosystem research project innovating and piloting novel digital services and business opportunities for a real smart city.

"Smart 5G small cell street pole infrastructure for digital service ecosystem in future urban city environments"

Partners:

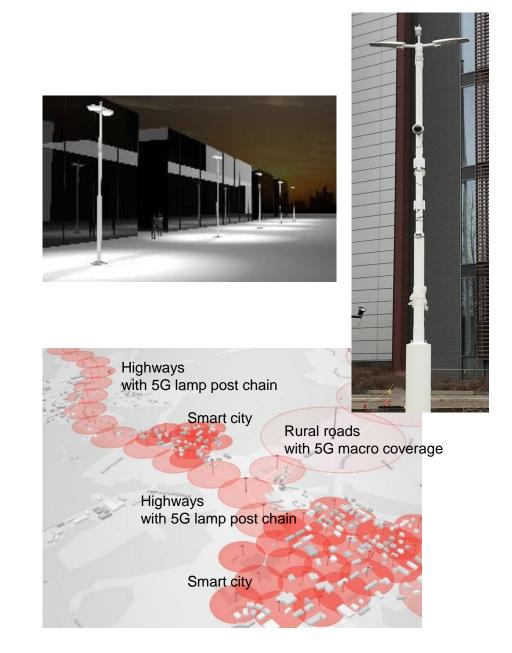

LuxTurrim5G - Approach and Targets

- Develop and demonstrate key technical solutions and concepts based on smart 5G light pole infrastructure with integrated / camouflaged 5G mmW radios, sensors, cameras, information displays and other devices.
- Build a real-life real-time outdoor test and demo network in Nokia Espoo Campus to demonstrate new innovations on top of and enabled by 5G small cell infrastructure
- Create open access ecosystem, business model and technology platform for digital services which could be extended to sub-urban, rural areas and highways
- **Pilot business & service innovations** on e.g. navigation, information sharing & advertisement, public safety, weather monitoring, building automation and smart lighting

LuxTurrim5G - Solution

Concrete technology enablers and service concepts developed & piloted for open Smart City Digital Ecosystem

Indoor/Outdoor connections

Signal propagation through construction materials

- RF permeable windows:

Lammin Windows

5G network

High capacity, low latency Small cells -> many sites

Light pole: **Exel Composites**

Radom materials: Premix

Operators

Business models for:

Transportation

- Existing ones
- New ones?

Smart city services on top of a common platform

Examples:

- Video surveillance, public safety, infotainment screens: Teleste
- Air quality, weather: Vaisala
- Location, navigation: Indagon
- Lighting/charging: **Ensto**
- Drones: Rumble Tools

5G network: Nokia Bell Labs

City Infrastructure

Light pole infra, power, data transport

Infra planning: Sitowise Infra owner: **Espoo**,...

Research partners

contributing in each research area: **Aalto & Tampere University, VTT**

LuxTurrim5G ecosystem project structure

Multi-disciplinary joint research combining business and technology

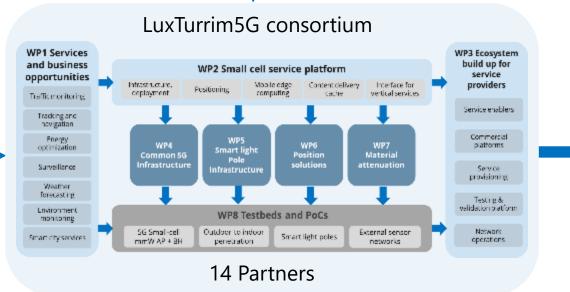

Development of New Technologies

- 5G RF communications
- Sensors, displays, signal windows, antenna materials
- 3D modelling

Identification of Business Opportunities

- 5G ecosystem opportunities:
 key players, roles, and
 sharing of costs
- Smart City service needs

Creating New Digital Ecosystem Business Cases

- Operators business case
- Smart city business case
- Service providers business case
- Business cases for different service providers

Proof of Concepts

- 5G smart light pole
- City infra planning
- New digital services (4 pilot cases)

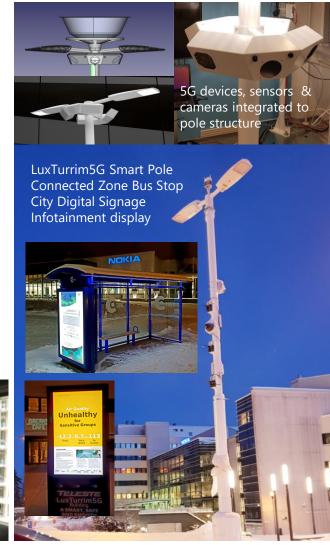

LuxTurrim5G has responded the needs

- Developing **breakthrough enablers** for a digital smart city ecosystem in street level deployments
- Building key elements from show case demos to pilots for a versatile technology and service platform utilizing a single flexible and fast 5G network to enable data-driven services
- Showing **intensive co-creation** & creating active innovation ecosystem which brings results with high impact

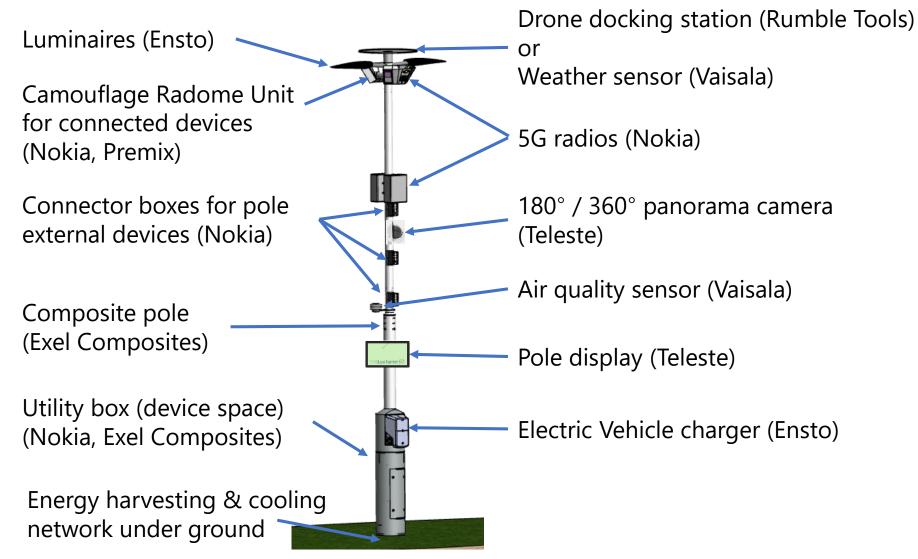

LuxTurrim5G smart light pole concept

LuxTurrim5G – main achievements

- Smart Light Pole concept proven
 - Technical developments and first proof-of-concept pilots done
 - Four Smart Light Pole prototypes with integrated radios and sensors deployed in the test bed
- Connected zone public safety bus stop show case demonstrated
- Selected first of a kind **service demos** utilizing camera & sensor data fusion
 - Showcased already to 500+ visitors (40+ groups) at Nokia Karaportti Campus
- Small cell connectivity and service platform
- 5G mmW Radio development
- **Indoor/outdoor signal attenuation** and in 5G mmW penetration through various building materials studied widely 5G window
- Basic understanding created on **business landscape**, **business models and value networks** enabling new value adding services for smart cities based on the LuxTurrim5G concept and shared sensor data (cameras, weather sensors, etc.) studied together with all project partners

High interest & impact

TEKNIIKKA ASUMINEN DIGITALOUS VERKOT PALVELUT

Nokia-taustaisella yhtiöllä on käynnissä kolme isoa älyliikenteen digihanketta.

Liikenne digitalisoituu nyt vauhdilla. Esimerkiksi ajoneuvojen välinen, ajoneuvon ja kuljettajan välinen ja avoneuvojen ja liikenneväylien välinen tiedonsiirto ja -vaihto kehittyvät nopeasti.

"Logistiikka on viimeisiä alueita, joita on alettu digitalisoida", sanoo huipputarkan gps-paikannuksen ja tiedonsiirron laite- ja palvelutoimittaja Indagonin toimitusjohtaja Matti Lankinen.

of Smart Cities could not be served with the existing capacity of mobile networks. The development of new communication systems, such as 5G, will be thus acting as enablers for new kind of services and applications with

advanced requirements especially in terms of latency, resilience, coverage and bandwidth. Despite successful Smart City initiatives around the world, there is a need for a business model innovations' in the implementation of 5G infrastructure widely in the future. Ongoing project, LuxTurrim5G, will solve

critical challenges by developing and demonstrating concrete technical solutions for smart light pole based 5G infrastructure. This study focuses to
